PROFESSIONAL BACKGROUND

Postdoctoral Scholar

University of California Davis

February 2023 – Ongoing | Davis, CA

- **Failure Localization:** Developed ML models (FL, DANN, GAN) to detect and classify system failures, improving predictive maintenance; model optimization using knowledge distillation.
- **Multi-Band Upgrade Strategies:** Designed LSTM-based models to optimize network throughput by automating band upgrades.
- **Traffic Engineering:** Explored ML and non-ML methods for maximizing throughput, reliability, and minimizing delay in service provisioning.
- **Mentorship:** Guided Ph.D. students in ML and optical network optimization.

Postdoctoral Scholar

University of California Irvine

February 2022 – February 2023 | Irvine, CA

- **Domain Adaptation in ML:** Created ML models for domain adaptation in time-variant datasets, in collaboration with Intel AI/ML.
- **Feature Engineering:** Led feature engineering efforts on complex real-world datasets, including stress classification in the UNITE (health-driven) dataset.
- **Edge Computing:** Developed edge computing frameworks to optimize real-time data processing for IoT applications.
